

Direct Operated Type Solenoid Operated Proportional Throttle Valve

Features

- These proportional throttle directional control valves perform spool position feedback control by directly driving the spool with the proportional solenoid and detecting the displacement with the differential transformer.
- Combining the valve with a pressure compensation valve and the dedicated driver achieves highly accurate proportional flow rate control.
- Highly accurate proportional flow rate control with meter-in control at port P or meter-out control at port T can be realized by stacking the LEMS valves in combination with the dedicated reduction type pressure compensation valve (MGS) under the solenoid valve.
