

EG15* ... SERIES

SOLENOID GAS VALVES WITH 1/2" CONNECTION AND OPERATING PRESSURE UP TO 500mbar.

DESCRIPTION

This series of solenoid gas valves are of normally closed type, suitable for civil and industrial applications, supplied with alternate or direct current and inclusive of a wire-net filter on the inlet to avoid the entrance of dirt of > 1mm.

Gas valves marked with "S" or "L" after reference type have direct current supplied coil, which permitted to make actions as silent as possible.

There is the possibility to have a fast opening or a slow opening valve (obtained by special hydraulic shock-absorber), with flow adjustment and fast opening initial flow adjustment and inlet and outlet pressure plugs.

Gas valves of this series, conforming to EN161, have a CE type Certificate (CE Reg. N° 63AQ0626) in accordance to European Directives 90/396 and 93/68.

TECHNICAL FEATURES

Class:	A
Group:	2
Supply voltage (1):	220-240Vac / 50-60Hz 110Vac / 50-60 Hz
Operating temperature:	-10°C / +60°C
Closing time:	≤ 1s (all versions)
Opening time:	≤ 1s (quick opening versions only)
Mounting:	vertical and horizontal
Body:	die-cast aluminium
Core hitch:	PG9

(1) Versions with different supply voltages are available.

INSTALLATION

- Respect the applicable national and European standards (e.g. EN60335-1) regarding electrical safety.
- Assemble the valve to the installation so that the arrow on the valve body has the same direction as the fuel flow.
- During the assembly of the valve to the installation piping, avoid twisting on the sheath and always use an hexagonal key to be fitted to the valve body.
- Make sure that no foreign matters have entered the valve body.
- Make sure that the max. fuel input pressure never exceeds the value appearing on the label.

SOLENOID VALVES CONNECTIONS

It is possible to connect two valves with two fixing brackets and an O-ring to guarantee the sealing. The whole system is blocked by two screws, as shown in Fig.1. This method permits to avoid the onerous use of threaded junctions.

Fig.1

SOLENOID VALVES WITH BY-PASS

All versions of EG25*... and EG30*... valves can be equipped with a by-pass valve (with orifice diameter 11mm) directly fitted on the body. In this way it is avoided the installation of a separated by-pass valve.

Both to the main valve and to the by-pass one, flow is given from the same inlet gas pipe, even if they have different electrical controls.

By-pass valve can have fast opening, and can be with or without flow adjuster, but anyway inclusive of an inside rectification circuit, which permitted to use suitable attenuators, to make its actions as silent as possible.

DIRECTIONS FOR EG15*L... VALVES ADJUSTMENT

Flow adjustment for EG15*L...

To adjust the gas flow, you have to remove one of the two screws used to fasten the lag group (the not enamelled one, marked with 4 in Fig.2) and rotate clockwise the whole group to reduce the flow or in the opposite direction to increase it.

Opening time adjustment

After removing the top protection, by rotating it counterclockwise, you have to act on the adjustment screw, marked with 1 in Fig.2; by rotating clockwise, the opening time becomes longer, by rotating in the opposite direction, the opening time becomes shorter.

Quick release initial flow adjustment

After removing the top protection by rotating it counterclockwise, if you rotate clockwise the nut marked with 2 in Fig.2, the initial release will be reduced; if you rotate the same nut counterclockwise, the initial release will be increased.

Fig.2

Fig.3

DIRECTIONS FOR EG15*SR... VALVES ADJUSTMENT

Flow adjustment

Rotate clockwise the screw marked with 1 in Fig.3 to reduce the flow, rotate in the opposite direction to increase the same.

BY-PASS								
EB7-S	0 ÷ 100	11		275	BE7*GMO	8	6	3.2
EB7-SR	0 ÷ 100	11		285	BE7*GMOE	14	7	3.2

TYPE REFERENCE

EG15 * S R P * EB7 - S G MO 8 220/240-50/60

Type _____

Opening Type (fast/slow) _____

Ref.	Description
A	Fast opening valve.
S	Fast, silent opening valve.
L	Slow, silent opening valve (this version is inclusive of flow adjuster).

Flow adjustment _____

Valve fitted with equipment for flow adjustment.

Pressure plug _____

Valve inclusive of pressure plug G 1/4" size.

Valve fitted with BY-PASS _____

By-pass valve supply and connection are the same of the main valve. The following reference "GMO", therefore, is referred to both by-pass and valve.

By-pass type _____

Ref.	Description
S	Fast opening.
SR	Fast opening with flow adjustment.

Supply voltage

Ref.	Description
110-50/60	110Vac - 50/60Hz
220/240-50/60	220/240Vac - 50/60Hz

Test pressure point position

Ref.	Position
5	Outlet left.
6	Outlet right.
7	Inlet left.
8	Inlet right.

Connection type

Type	Description
2C	Connection with two core cable -IP65.
3C	Connection with three core cable -IP65.
FP	Connection with flat fast-on.
FD	Connection with fast-on for plug DIN43650-IP65.
MO	Connection with terminal board -IP40.

Winding type

Type	Description
A	Supply in alternate current.
C	Supply in direct current.
G	Supply in alternate current, but valve operates in direct current thanks to an embodied rectification bridge.
